West Kelso, Wash.

Visitors are always welcome to visit our plant to see TOLLYCRAFTS under construction. Pictured here is the TOLLYCRAFT plant located in West Kelso adjacent to Cowlitz River.

### CONSTRUCTION DATA

TOLLYCRAFT Boats are constructed of 3/8" 5 ply Super HARBORD, AA Grade, marine plywood, on oak and mahogany framing, screw fastened. A sawn shelf at deck line gives a perfect sheer line, adding to the overall strength of the hull.

The hull form is a deep vee forward and a moderate vee carried to transom, producing a hull that planes easily with minimum horsepower. The hull banks beautifully on turns—the deep vee gives excellent non-pounding, soft level ride, the freeboard and flare forward makes a dry safe boat.

TOLLYCRAFT Boats for 1955 will be finished with mahogany decks and cabins stained and varnished a rich red mahogany to a furniture like finish. Hulls are painted white with bottoms, floor boards and cabin tops painted blue green. We are using an alkid resin type spar varnish which produces a high gloss long wearing finish. A wood sealer is used to minimize grain raise, and the highest grades

paint obtainable are used throughout. Every part of our boat receives not less than four coats of finish.

TOLLYCRAFT Co. is constantly testing hulls and materials and finishes to produce the finest boat possible consistent with price and use.

Changes and extras can be made on any model consistent with good design and judgment. See your dealer as to price and advisability.

Any TOLLYCRAFT hull can be fiberglassed entirely or bottom only at the factory. Your dealer has prices on this as an extra.

TOLLYCRAFT Boats are sold only through authorized dealers in Washington, Oregon, California, Arizona, Nevada, Montana, Utah and Idaho. No direct factory sales are made except to government agencies in these states.
